All the code done for making the SkullMania project/assignment has been attached in this GitHub repository.

Display of Player's Hit/Damage Points

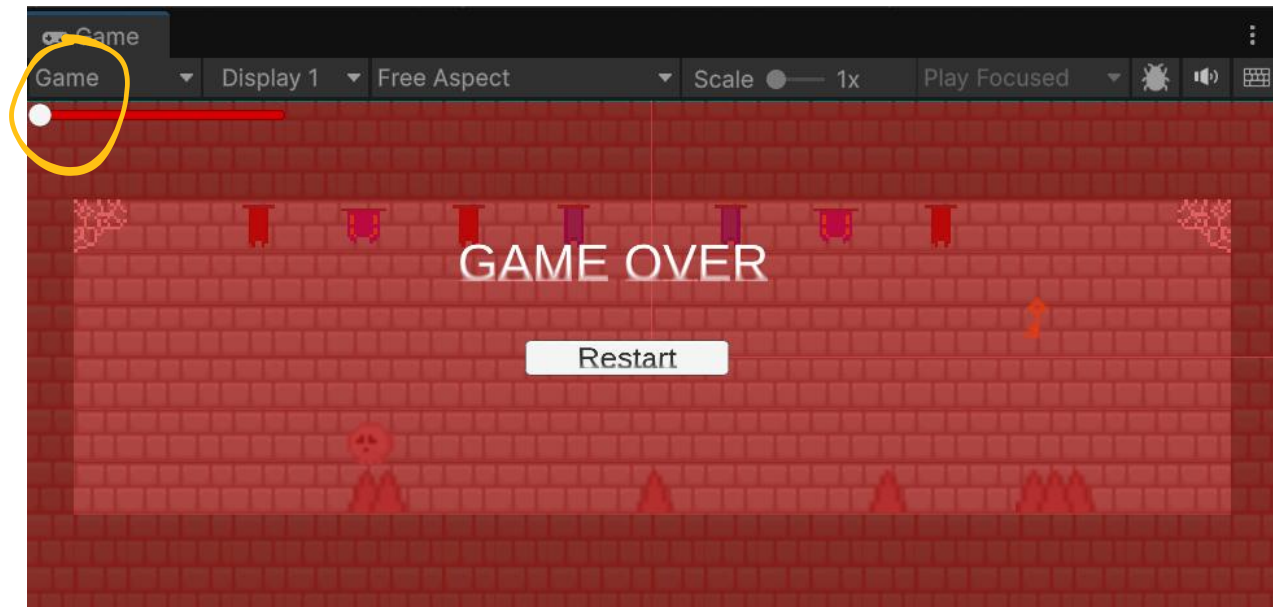

Health bar during starting game:

Health bar during collision on Spike:

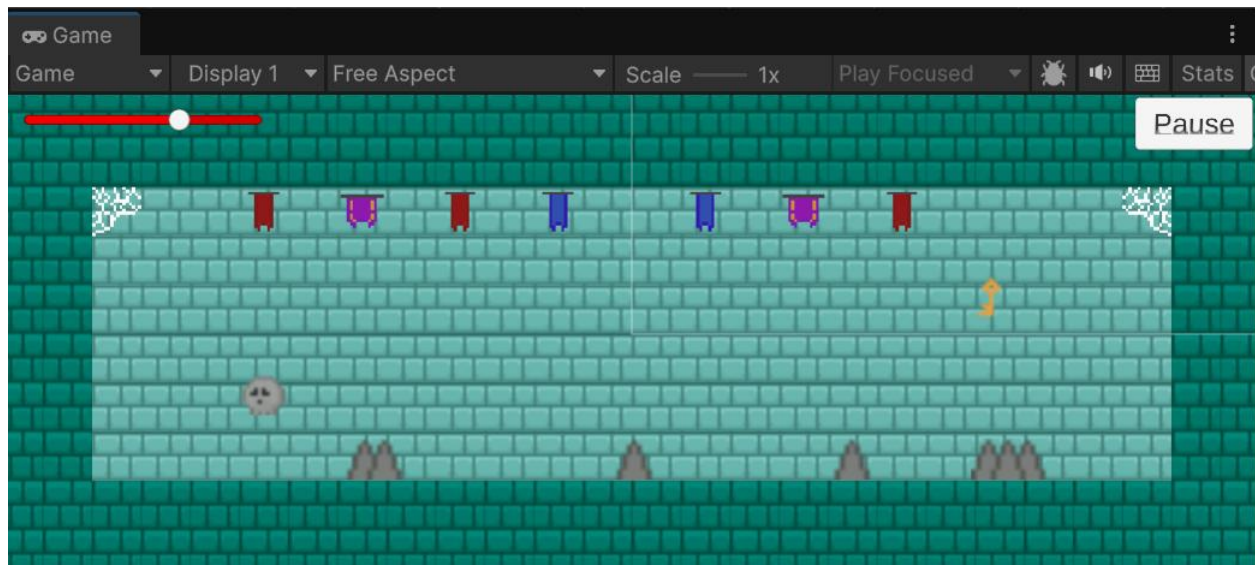

Health bar when game is over:

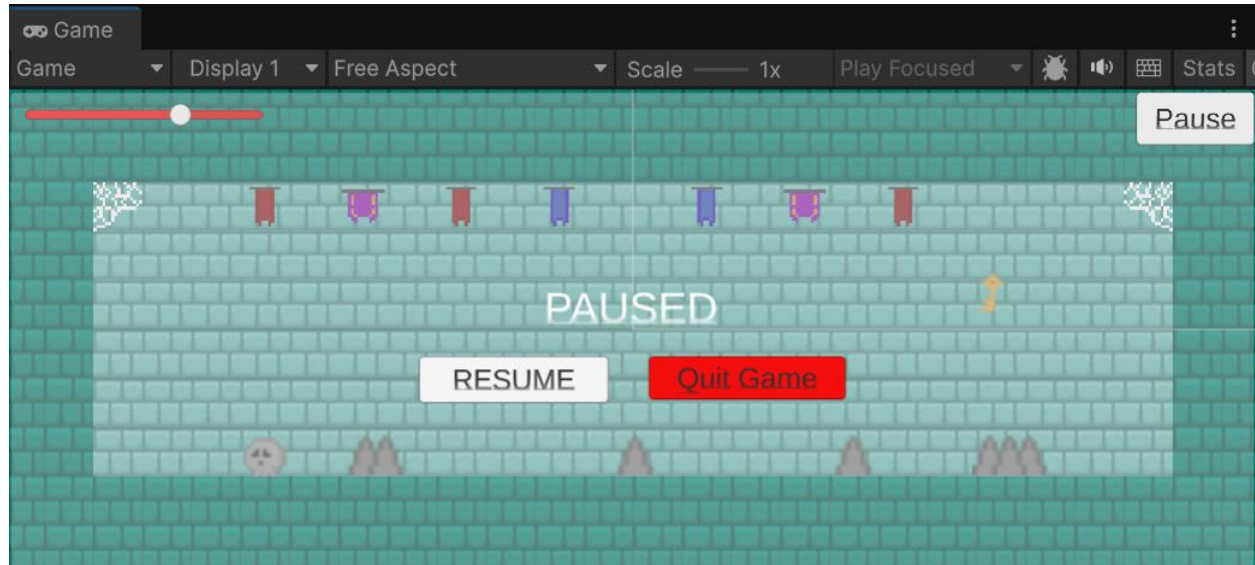

UI elements for Pause/Start/Quit:

Normal Gameplay mode without pressing “PAUSE”:

Gameplay mode after pressing “PAUSE”:

Note: The Quit button functionality will not work here because we are viewing this in the normal preview mode. When the game itself is built then upon clicking on the **Quit** button, the game shall close completely, and the user would have to open it again.
